BakerTop™ Ovens

10, 6, 4 pans

The right size for every need.

The **BakerTop™** countertop ovens are the result of the cooperation and the dialogue between UNOX and the most demanding pastry chefs and bakers in the world. Each detail has been designed to guarantee the perfect result of any baked good, from meringues to cakes, from pizza to traditional breads.

The perfect distribution of the air and heat inside the baking chamber, the absolute precision in the temperature control, the possibility to accurately manage the humidity and the LED light that illuminates every baking shelf allow the professional to always have complete control of the baking process in order to exceed the most demanding sensory expectations.

The ADAPTIVE.Clima technology, standard for the **BakerTop™** ovens, detects the amount of food placed into the baking cavity and automatically optimizes the baking process to deliver a consistent result - any time, any load.

Every detail of a **BakerTop™** oven has been designed to provide the professionals the latest technology while honoring classic pastry and bakery preparation.

16 pans

Efficiency and Volume.

The 16 pan **BakerTop™** ovens have been designed for the master pastry chefs and bakers of the world that need to combine the best baking quality with maximum production.

Thanks to the standard ADAPTIVE.Clima technology, the 16 pan **BakerTop™** ovens deliver to the most demanding professional the certainty of an even color and a consistent texture in any load condition. ADAPTIVE.Clima detects the amount of food placed into the baking cavity and automatically optimizes the baking process to deliver a consistent result - any time, any load.

The 16 pan **BakerTop™** ovens deliver outstanding baking quality with a significantly smaller footprint and increased energy efficiency compared to any conventional rotary rack ovens that must utilize large baking chambers for the rotation of the rack. The AIR.Maxi™ technology guarantees a perfect air and heat distribution on every baking pan without the need to turn the rack.

AIR.Maxi™

Baking uniformity. Baking pleasure.

Air is the medium for the heat transmission and therefore the means used to bake the product. The performance of air flow is fundamental to obtain uniformity of baking in all the points of the single tray and in all the trays.

For this reason the study of air flow inside the chamber plays a leading role in the design of all UNOX ovens. The AIR.Maxi™ technology has been studied by UNOX to obtain perfect distribution of the air and heat inside the baking chamber.

Multiple fans in the design of UNOX ovens ensure perfect uniformity on all trays, from the top one to the bottom one. Auto-reversing motors combined with high speed revolving fans ensure perfect uniformity within every single pan.

The possibility to select six air flow speeds within the chamber with or without fan reverse function and one semi-static mode, allows you to bake any kind of product, from the lightest and most delicate to the ones that require a very high heat transfer.

ADAPTIVE.Clima

Perfect and reliable. The certainty of the result.

Thanks to ADAPTIVE.Clima technology, **BakerTop™** ovens constantly monitor all of the baking parameters, not just the temperature but also the real humidity in the baking cavity, and allows the user to obtain the desired result every single batch, with the guarantee of an always excellent finished product, independent of the number of pans put in the oven.

The constant control of all the baking parameters also allows **BakerTop™** to accurately acquire the temperature and humidity trends during the whole baking process, detecting also the effects of manual interventions made by the user as, for example, the door opening. Once that the desired result is achieved, ADAPTIVE.Clima technology allows the user to memorize the actually occurred process and to repeat it infinite times, with the certainty of an always identical baking outcome and with no supervision or interventions by the user.*

* For this use we recommend to use the MULTI.Point core probe XC255.

DRY.Maxi™

Baking in absence of humidity. The exaltation of the flavour.

The presence of humidity during the last phases of the baking of leaven products can compromise the achievement of the desired result.

Humidity does not permit to the product to grow, to reach uniform goldening and crispness and to release all of its flavor.

DRY.Maxi™ technology allows the rapid extraction of the humidity from the baking chamber, both the one released by the food and the one eventually generated by STEAM.Maxi™ technology in a previous baking step.

In bakery and pastry, DRY.Maxi™ technology ensures to exalt the flavor, allowing to obtain a dry and well structured product with an even internal structure, characterized by a crisp and crumbly external surface.

STEAM.Maxi™

The steam perfection. Simple as a water drop.

Baking with steam, in particular at low temperature, is used in patisserie as a modern alternative to the traditional bain-marie to cook and to pasteurize creams.

Also, to introduce humidity in the chamber in the first minutes of the baking process of leavened products promotes the internal structure development and the goldening of the external surface.

The STEAM.Maxi™ technology allows **BakerTop™** ovens to perform any kind of steaming, even those more delicate at low temperature.

This revolutionary system studied by UNOX marks the beginning of a new era for steaming in bakery ovens. STEAM.Maxi™, compared with the traditional boiler technology, guarantees the capacity to produce steam immediately and the reliability that the simplicity of its design allows.

The combination of STEAM.Maxi™ and AIR.Maxi™ allows UNOX ovens to transform water to steam. This creates steam, that is up to three times higher quality than a traditional direct-injection ovens, accurately controlling the steam production at every temperature starting from 48°C.

MULTI.Time

And if time had 9 dimensions?

In modern bakery and pastry laboratories it's not uncommon the need to bake simultaneously products with different dough, shape and weight.

With MULTI.Time is possible to use the oven in a continuous mode and to manage up to 9 different timers. It is possible to put in the oven in any moment products that require different baking times having the certainty of the maximum control.

MULTI.Time function also automatically updates the baking time at every door opening, always ensuring an optimum result.

Baking Essentials

Innovative and functional. Essential for your daily production.

Within the UNOX research applied to the baking process we could not miss particular attention to accessories and equipment needed to increase the versatility of the oven for your everyday use.

There is a Baking Essentials solution for each type of product: from puff pastry to a sponge cake, from biscuits to a cupcake, from croissants to pizzas and leavened products.

The innovative Baking Essentials pans and grids allow the ability to deal with all types of baking, otherwise only possible with additional professional equipment, for example traditional pizza ovens or static pastry ovens.

The versatility of the **BakerTop™** ovens drastically reduce the investment required for setting up a complete and versatile laboratory, with considerable savings of money and space.

FAKIRO™

Black.Bake

Baguette

PATENTED

Black.Baguette

Protek.SAFE™

Safety and efficiency.

Protek.SAFE™ technology is a part of the **NON-STOP EFFORTS** program at UNOX which engages itself to reduce to a minimum the environmental impact of the product and the baking process that within them are made.

Protek.SAFE™ technology eliminates the unneeded energy loss to reduce the energy consumptions and to contribute to the environmental compatibility of the baking process performed in the **BakerTop™** ovens.

Thanks to the use of innovative insulating materials, Protek.SAFE™ guarantees the low temperature of the external surfaces of the **BakerTop™** ovens, always ensuring the maximum safety of the working environment.

UNOX.Link

Advanced management of cooking and HACCP data.

Thanks to the BlackBox function of the UNOX.Link **XC 237** kit it is very easy to download from the **BakerTop™** oven all the HACCP data of the last 3 months of use of the oven in order to allow a simple and effective control of the correct appliance of the HACCP procedures into the laboratory. The OVEX.Net 3.0 software provides energy consumption data and equipment utilization statistics to allow an effective and simple control of the running cost of any **BakerTop™** equipment.

Thanks to the OVEX.Net 3.0 software it is also possible to easily download from the infonet.unox.com website the UNOX recipes book, select and adjust the recipes or create new ones and then transfer them to the **BakerTop™** memory, so the operator can easily recall the right baking program with just a touch of a finger.

The UNOX.Link **XC 237** kit is a precious tool to make the use of the **BakerTop™** ovens easier, to control its performances and increase its productivity.

The UNOX.Link **XC 238** Kit does not only have all the same functions of the **UNOX.Link XC 237** but it also allows to connect the **BakerTop™** to the Internet in order to provide a remote access to all the BlackBox data in any given moment of the day.

300 °C 60 °C

BakerTouch

Power and Simplicity. All in a single touch.

The BakerTouch digital control panel allows the operator to manage all the UNOX appliances of the **BakerTop™** line which are linked to the oven with a single interface.

The BakerTouch technology also monitors the amount of water filtered by the UNOX.Pure-RO (reverse osmosis filter) or UNOX.Pure (water softener), signaling to the operator the correct time to replace the filters.

The touch technology of the buttons grants the ease of cleaning and eliminate the risk of wear and tear.

MAXI.Link

Simplicity and flexibility in the professional laboratories.

MAXI.Link technology allows simplicity and makes it easier to work inside the modern professional laboratory.

Thanks to possibility of creating baking columns made by two **BakerTop™** stacked ovens, MAXI.Link technology allows to bake at the same time products that need different temperature, humidity and time. To turn on only the necessary ovens to manage the real demand, allows you to use in the best way the available energy and to reduce to a minimum consumption and the related costs.

The EFFICIENT.Power mode reduces up to 33% the power needed for the functioning of the baking column through an accurate management of the energy needs and the distribution of the absorbed power of the units of which the column is composed by.

Complementary equipments

DeckTop

Technology and Tradition together.

The **XB 264 DeckTop** is the deck oven designed for those pastry chefs and bakers that want to combine the pastry and bakery tradition with the best available technology.

The Stone baking surface of the **BakerTop™ XB 264 DeckTop** has been designed to deliver very uniform baking in a time tested tradition. The heat is slowly and gently transfer to the dough to create a dense loaf and a textured surface.

The **XB 264 DeckTop** is the ideal solution for those who want to combine traditional baking with modern baking in only one **BakerTop™** column, with maximum versatility and minimum footprint. The **XB 264 DeckTop** can be combined with the 6 and 4 pan **BakerTop™** ovens and it is controlled by the BakerTouch digital control panel.

Prover

The perfect place to start.

Once upon a time, doughs were traditionally wrapped in a cloth and left to rise during two or three days in a dry and cool place. The cloth retained the moisture and provided the conditions for the proving process to occur.

Today, the **BakerTop™ XL 415 Prover** allows modern bakers to accurately manage temperature and humidity of the proving process in order to always achieve a consistent result while reducing proof time.

Utilizing its accurate humidity sensor, the **BakerTop™ XL 415 Prover** automatically adjusts the moisture in the proving cabinet to create the desired conditions for any dough.

In combination with **BakerTop™** ovens, the **BakerTop XL 415 Prover** creates a complete baking station for any need.

Rotor.KLEAN™

Integrated Automatic Washing System. More value to time.

Rotor.KLEAN™ is the washing technology designed for **BakerTop™** ovens to automatically obtain the maximum hygiene and food safety in the cooking chamber and to eliminate time consuming and troublesome manual cleaning operations.

The Rotor.KLEAN™ system provides multiple washing cycle options, which allows the operator the ability to reduce and manage the consumption of water and detergent, ensuring an ecological and economical cycle.

The particular washing cycles that are used, allow the reduction to minimum the consumption of UNOX.Det&Rinse, ensuring an ecological and economical cycle.

UNOX.Det&Rinse

The ultimate in cleanliness. Just in a single product.

UNOX.Det&Rinse is the innovative cleaning product that combines in a sole product the cleaning force of the detergent and the rinsing action of the rinse. UNOX.Det&Rinse has been designed by UNOX to optimise the performance of the Rotor.KLEAN™ technology.

Regular use of the Rotor.KLEAN™ wash system combined with the UNOX.Det&Rinse cleaning product will ensure the oven remains in optimum condition, to ensure continued quality cooking results, maximize product reliability and at the same time minimise the usage of water and chemicals.

UNOX.Pure-RO

Reverse Osmosis water filtering technology.

UNOX.Pure-RO utilizes Reverse Osmosis water filtering technology specifically designed by UNOX, to ensure a complete demineralisation of any kind of water, even when it contains iron ions or high quantity of “dissolved” salts. It is the ideal solution to ensure the longest reliability and durability of the **BakerTop™** ovens, protecting the cooking chamber from corrosion and limescale. UNOX.Pure-RO features a pump to feed the STEAM.Maxi™ circuit even when the pressure of the water supply is very low.

The UNOX.Pure-RO water filtering devices also eliminate the harmful components that might alter the taste of food, such as chlorine.

The BakerTouch technology also monitors the amount of water filtered by the UNOX.Pure-RO or, signaling to the operator the correct time to change the filters.

UNOX.Pure-RO guarantees a perfect **BakerTop™** baking chamber, increasing the durability of the oven and reducing its maintenance and running costs.

UNOX.Pure

The new generation solution for water filtering.

UNOX.Pure is the filtering system developed by UNOX to provide a quick, safe and compact solution to guarantee an high quality filtering of the steaming water.

In only one UNOX.Pure cartridge there are 4 subsequent filtering stages by which the UNOX.Pure filter eliminates the harmful components that might alter the taste of food and prevents limescale and corrosion.

The BakerTouch technology facilitates the operator's work by monitoring the amount of water filtered by the UNOX.Pure and signaling to the operator the correct time to change the filters.

UNOX.Pure maintains the ideal conditions for the **BakerTop™** baking chamber, when the installation of the UNOX.Pure-RO is not possible.
